

FIREPROOF VAULTS

Durasteel lined Vaults

Durasteel is a composite panel of fibre reinforced cement offering 4 hours of fire protection.

(A) mechanically bonded to punched steel sheets

(B) on both outer surfaces. It is classified as non-combustible to BS 476: Part 4: 1970 and A1 to Clause 10 of BS EN 13501-1:2002.

Climate controlled

The climate control system keeps temperatures and humidity stable and at a constant level.

The real damage to records is from rapid fluctuations in humidity and temperatures and not from absolute figures.

Our main warehouse doesn't fluctuate significantly but these climate controls add an extra layer of protection.

Isolated Design

The vaults are in an isolated building separate from the main warehouses.

Meaning they maintain their own integrity even if the main warehouse becomes structurally compromised.
